Glossary of Terms

GE	General Electric	O. Reg. 359/09	Ontario Regulation 359/09
kV	Kilovolt	PCC	Point of Common Coupling
MW	Megawatt	TC	Transport Canada
NextEra	NextEra Energy Canada, ULC	The Project	Jericho Wind Energy Centre

1. Project Information

This Draft Site Plan has been prepared in accordance with Section 54.1 of *Ontario Regulation 359/09 (O. Reg. 359/09)* for the purpose of fixing the location of the turbines and the noise receptors identified in this Report.

1.1 Name of Project and Applicant

Jericho Wind, Inc., a wholly owned subsidiary of NextEra Energy Canada, ULC, (NextEra) is proposing to construct a wind energy project in the Municipality of Lambton Shores and the Township of Warwick, in Lambton County, Ontario and in the Municipality of North Middlesex, in Middlesex County, Ontario. The Project is referred to as the Jericho Wind Energy Centre (the “Project”). All turbines will be located on private lands.

The Project will be owned and operated by Jericho Wind, Inc., a subsidiary of NextEra. NextEra Energy Canada’s indirect parent company is NextEra Energy Resources, LLC, a global leader in wind energy generation with a current operating portfolio of over 90 wind energy projects in North America. Wind farms currently owned and operated by NextEra Energy Canada include: Mount Copper and Mount Miller (both 54 megawatt (MW)), located in Murdochville, Quebec; Pubnico Point, (31 MW) located near Yarmouth, Nova Scotia; and Ghost Pine (82 MW), located in Kneehill County, Alberta.

1.2 Location of Project

The proposed Project is located in the Municipality of Lambton Shores and the Township of Warwick, in Lambton County, Ontario and in the Municipality of North Middlesex, in Middlesex County, Ontario. The Project Study Area consists of the areas being studied for the wind energy component (Wind Energy Centre Study Area), as well as for the interconnection route (i.e., the area being studied for transmission lines to connect the Project to the electrical grid) (Transmission Line Study Area). The Wind Energy Centre Study Area is generally bounded by Lakeshore Road/Bog Line to the north, Egremont Road to the south, the Lambton Shores/North Middlesex municipal boundary to the east and Rawlings Road/Elarton Road to the west, in Lambton County. The Transmission Line Study Area is generally bounded by Kennedy Line, Parkhill Drive and Elginfield Road to the north, Jura Line, Elm Tree Drive and Poplar Hill Road to the south, Fernhill Drive to the east, and the Jericho Road to the west, in Lambton and Middlesex Counties.

The location of the Project Study Area was defined early in the planning process for the proposed wind energy facility, based on the availability of wind resources, approximate area required for the proposed project, and availability of existing infrastructure for connection to the electrical grid. The Project Study Area was used to facilitate information collection.

The following coordinates define the external boundaries of the Project Study Area, as shown on Figure 1-1.

UTM Coordinates

Easting	Northing
420938	4761752
419681	4780912
456597	4777307
453312	4766484

1.3 Description of Energy Source, Nameplate Capacity and Class of the Facility

The wind turbine technology proposed for this Project is the GE 1.6-100 Wind Turbine. With a maximum nameplate capacity of up to 150 MW, the Project is a Class 4 Facility.

1.4 Key Contacts

Project Proponent	Project Consultant
Derek Dudek Community Relations Consultant NextEra Energy Canada, ULC 390 Bay Street, Suite 1720 Toronto, Ontario, M5H 2Y2 <i>Phone:.....416.364.9714</i> <i>Email:Jericho.Wind@NextEraEnergy.com</i> <i>Website: ..www.NextEraEnergyCanada.com</i>	Marc Rose Senior Environmental Planner AECOM 300-300 Town Centre Blvd. Markham, Ontario, L3R 5Z6 <i>Phone:905.477.8400 x388</i> <i>Email:marc.rose@aecom.com</i>

1.5 Facility Components

The major components of the Project are proposed to be:

- 97 GE 1.6-100 Wind Turbine generator locations and pad mounted step-up transformers (however, only approximately 92 turbines will ultimately be constructed);
- Turbine laydown and storage areas (including temporary staging areas, crane pads and turnaround areas surrounding each wind turbine);
- Construction laydown area for the purposes of providing temporary storage of construction materials and temporary construction offices and ancillary equipment such as electrical service from the local electrical distribution line;
- A transformer substation and ancillary equipment;
- 34.5 kV electrical collection lines to connect the turbines to the proposed transformer substation and other ancillary equipment such as above-ground junction boxes;
- A 115 kV transmission line to run from the proposed Project transformer substation to the proposed Bornish switchyard. A common 115 kV transmission line will carry electricity from the proposed Adelaide, Bornish and Jericho Wind Energy Centres to a Point of Common Coupling (PCC) on Hydro One's 500 kV transmission line;
- Turbine access roads;
- Permanent meteorological towers; and
- An operations and maintenance building and ancillary equipment such as an electrical service line connected to the local distribution service.

1.5.1 Turbine Specifications

With a total nameplate capacity of up to 150 MW, the Project is categorized as a Class 4 wind facility under O. Reg. 359/09. Although Jericho Wind, Inc. is seeking an REA for up to 97 turbine locations, approximately 92 turbines are proposed to be constructed for the Project.

The wind turbine technology proposed for this Project is the GE 1.6-100 Wind Turbine. The turbines are 3-bladed, upwind, horizontal-axis wind turbines that are state of the art technology. The turbines have a 100 m rotor diameter with a swept area of 7,854 m²; each blade is connected to the main shaft via the hub. The turbine is mounted on an 80 m tubular steel tower which contains an internal ladder provided for maintenance access. The turbine will be constructed on a foundation that is approximately 400 m². The foundation consists of poured concrete and steel rebar to provide added strength.

The nacelle houses the main components of the wind turbine such as the rotor shaft, gear box, couplings, control panel, bearing brackets and the generator. The nacelle is equipped with sound-proofing, is ventilated and the interior is illuminated with electric lights. Some of the wind turbines will have external lighting in accordance with the requirements of Transport Canada (TC).

Table 1 provides a description of the GE 1.6-100 Wind Turbine that will be used for the Project.

Table 1. Summary of Technical Specifications

Specification	GE 1.6-100 Wind Turbine
Make	General Electric
Model	1.6-100
Name Plate Capacity	1.62 MW
Hub Height	80 m
Rotor Diameter	100 m
Minimum Rotational Speed	9.75 rpm
Maximum Rotational Speed	15.33 rpm

1.5.2 Construction Laydown and Storage Areas

A temporary laydown and storage area will be constructed on privately owned land for the purpose of staging and storing equipment during the construction phase. A temporary electrical service line will be connected to the local distribution line for the purpose of providing electrical power to the construction offices. Activities on this site will include materials storage, equipment refuelling, and construction offices. The area will be approximately 4 hectares (10 acres) in area.

1.5.3 Turbine Laydown and Storage Areas

An approximately 122 m by 122 m square around each wind turbine will be established for the laydown and assembly of the wind turbine components. The construction offices will receive electrical power through a temporary electrical service line connected to the local distribution line.

1.5.4 Access Roads

On-site access roads to each turbine will be constructed to provide an access point to the properties for equipment transport during the construction phase and for maintenance activities during operation. Typically the access roads will be between 10 m and 20 m wide during the construction phase to accommodate the large cranes (with an additional clearance on each side for travel).

1.5.5 Collection Lines

The system that connects each turbine to the transformer substation will consist of 34.5 kV electrical collection lines that will be buried approximately 1 m below grade on private property or within the municipal road right-of-way. There may be occasional locations where the collection lines are placed above ground on wood, concrete or steel poles for technical reasons. Above-ground electrical junction boxes will be used to connect sections of collection lines.

1.5.6 Electrical Transmission

A 115 kV transmission line from the Project's transformer substation to the Point of Common Coupling (PCC) on Hydro One's 500 kV transmission line is proposed to be located on private property and within existing road rights-of-way. The proposed transmission line will pass through the Bornish switchyard located in the Transmission Line Study Area where the electricity from the proposed Adelaide and Bornish Wind Energy Centres will converge. From this point, the proposed 115 kV line will carry electricity generated by all three projects to the PCC on the existing Hydro One 500 kV transmission line. A separate report has been prepared to describe the section of the transmission line between the Bornish switchyard and the PCC and is appended to this report.

It is anticipated that the transmission line will be overhead and mounted on new transmission line poles. There may be occasional places where the line is placed underground for technical reasons. The poles are proposed to be constructed of wood, concrete or steel and typically will be between 18 m and 30 m tall.

The interconnection plan for a wind energy centre is subject to study, design and engineering by: (a) the Independent Electricity System Operator which manages the province's electricity grid; (b) Hydro One; and (c) the Ontario Energy Board, which regulates the industry through the Transmission System Code and the Distribution System Code.

1.5.7 Transformer Substation

Approximately two to three hectares in size, the Jericho transformer substation will be located on privately held lands through a lease agreement or on land purchased by Jericho Wind, Inc. The electricity collected via the 34.5 kV collection lines will converge at the transformer substation where the electricity will be "stepped-up" to 115 kV for transmission. The substation equipment is expected to include an isolation switch, a circuit breaker, a step-up transformer, transmission switch gear, control housing, instrument transformers, grounding and metering equipment. All substation grounding equipment will meet the Ontario Electrical Safety Code. The substation will be connected to the existing electrical distribution line to supply power for the control housing lighting and equipment.

1.5.8 Operations and Maintenance Building

An operations and maintenance building, approximately 30 m by 15 m in size, is scheduled to be constructed on privately held lands (on or near the same parcel as the substation for the Project) for the purpose of monitoring the day-to-day operations of the wind energy centre and supporting maintenance efforts. A small parking lot will be constructed to accommodate vehicles. Prior to the construction phase, a Stormwater Pollution Prevention Study will be conducted to address any potential effects associated with stormwater runoff.

Potable water will be supplied by a well or through the municipal water system and a septic bed will be constructed for the disposal of sewage. The septic bed will be constructed to the minimum size required for the size of the

operation and maintenance building. It is the Project owner's responsibility to ensure proper maintenance of the septic system. The operations and maintenance building, septic system and water supply will be constructed in accordance with applicable municipal and provincial standards.

1.5.9 Permanent Meteorological Towers

Permanent meteorological towers are an operational requirement of the Independent Electricity System Operator (IESO) as an electricity market participant (this includes all generators of electricity) and allow the IESO to operate the system reliably and safely.

Permanent meteorological towers will be installed at the Project. These are typically up to 80 m in height. No significant soil or vegetation disturbance is anticipated. The use of meteorological data is key to the safe and efficient operation of a wind energy centre. Some operational decisions made using meteorological data include:

- Cut-in wind speed;
- Cut-out wind speed;
- Turbine shut down during potential icing conditions; and,
- Turbine shut down during extreme weather events.

2. Project Site Plan

As indicated in Section 54.1 of O.Reg 359/09, this Draft Site Plan, illustrated in **Figures 2-1 to 2-3**, depicts the turbines proposed as part of the Jericho Wind Energy Centre in addition to noise receptors within 2 km of each turbine. Table 2 provides UTM coordinates of the turbine locations shown on **Figure 2-1, 2-2 and 2-3**. **Appendix A** provides UTM coordinates of the 2,484 noise receptors that are located within 2 km of turbines. **Appendix B** provides the coordinates for the receptors located in the insets on **Figures 2-1, 2-2 and 2-3**.

3. Existing and Proposed Neighbouring Turbines

There are six existing turbines in the Municipality of Lambton Shores that are within 5 km of Jericho turbines. These turbines, which comprise the Ravenswood Wind Farms, operated by Sky Generation Inc., have a generating output capacity of 1.65 MW. **Figure 3-1** illustrates the location of these turbines in relation to the proposed turbines for this Project and UTM coordinates for the turbines are provided in Table 3.

6	Ravenswood	420923	4780537

Note: All co-ordinates are provided in NAD 83 Zone 17

There are also 19 turbines that are planned for the Municipality of Lambton Shores that are within 5 km of Jericho turbines but no site plan has been released as of yet. These 2.126 MW turbines are a component of the Cedar Point Wind Farms, proposed by Suncor Energy. **Figure 3-1** illustrates the location of these proposed turbines in relation to the proposed turbine layout for this Project and UTM coordinates are provided in Table 4.
