

Tenaska + Cordelio Power

A Collaborative Approach to Wind Development

Tenaska has a long-standing reputation for developing energy projects that are safe, environmentally responsible and community minded. We have seen success in developing our own projects, as well as in working with other companies to get new projects built. Tenaska puts a lot of thought and consideration into which companies meet our high standards for joint development. We look for companies that are honest and fair, financially stable, relationship driven and experts in their own right.

Tenaska is proud to be working with Cordelio Power to develop wind projects across the United States. Like Tenaska, Cordelio Power understands the important role that landowners and communities play in the overall success of a project. Their approach is centered on building long-term relationships with communities and landowners through the development, construction and operation phases of their projects.

Tenaska and Cordelio Power began working together several years ago on two wind projects in Missouri, and we were pleased with how well our teams worked together while remaining responsive to landowner and community feedback. Today, we are working to jointly develop a large portfolio of wind projects across the United States.

Tenaska and Cordelio Power are optimistic about our growth plans, and we look forward to bringing our collaborative approach to your community!

Tenaska is one of the leading private, independent energy companies in the United States. Over the past 35 years, Tenaska has earned a reputation for developing responsible energy projects and being a good business neighbor. Tenaska remains rooted in the Midwest, with offices and project locations across the country.
